

Lorenzo Scaturchio

Machine Learning Engineer

(909)-993-3077 | Santa Monica, CA | lorenzosca7@protonmail.ch

Portfolio: lscaturchio.xyz | github.com/gr8monk3ys | linkedin.com/in/lorenzo-scaturchio

SKILLS

Languages: Python, SQL (PostgreSQL), Scala, C++

LLM/GenAI: Prompt Engineering, RAG, LangChain, FAISS, Hugging Face Transformers

ML Frameworks: PyTorch, scikit-learn, Weights & Biases, MLflow

Infrastructure: GCP (Vertex AI, BigQuery), Docker, Kubernetes, FastAPI, Pydantic

EDUCATION

Master of Science in Applied Data Science

University of Southern California, Viterbi

August 2022 - December 2024

Los Angeles, CA

Bachelor of Science in Computer Science & Engineering

University of California, Merced

August 2018 - May 2022

Merced, CA

Certifications: DeepLearning.AI Natural Language Processing Specialization (2025); Google Advanced Data Analytics Professional Certificate (2025)

WORK EXPERIENCE

Machine Learning Engineer

Sizzle

June 2024 - May 2025

Los Angeles, CA

- Designed and deployed an end-to-end computer vision pipeline on GCP Vertex AI and BigQuery for macro-nutrient estimation, owning the cloud deployment and monitoring behind 5k+ daily inference requests in production.
- Integrated a fine-tuned vision model into the production REST API using Kotlin, achieving <200ms p95 latency and handling implementation and troubleshooting questions from 10+ B2B clients.
- Built data labeling and preprocessing workflows for a 50k+ food image dataset, writing the guidelines and training annotators on augmentation strategies that improved model accuracy by 12 percentage points.

AI/ML Freelancer

Upwork

August 2022 - Present

Los Angeles, CA

- Ran discovery with 4 clients and delivered custom ML solutions: fine-tuned classification models, RAG-based document Q&A systems with prompt engineering, and automated data pipelines using open-source and commercial LLMs.
- Built MLOps workflows (CI/CD, model versioning, monitoring), maintaining a 98% Job Success Score through clear communication and documentation at handoff.

Operations Coordinator

G&M Trailer Repair, Inc.

2022 - Present

Los Angeles, CA

- Asked to “organize the files” at a paper-run trailer shop; diagnosed the real problem as records nobody could query, and rebuilt receipts, pick tickets, and job scheduling into a searchable knowledge base of Excel systems and a Kanban board inside Microsoft Teams – the suite the crew already used, which is why adoption stuck.
- Took ownership of the parts inventory, an hour log normalizing labor against per-client rates, and PTO accrual formulas, building automation for the repetitive steps in VBA and invoicing in QuickBooks.
- Coordinated repair intake and dispatch for a fleet maintenance operation running roughly 200 trailers per month, sequencing pickups by the work each unit needed through daily collaboration with a primarily Spanish-speaking crew.

Bioinformatics Data Analyst

Joint Genome Institute

May 2020 - August 2021

Berkeley, CA

- Developed scalable data processing pipelines in R for genomic homology comparison, cutting processing time by 90% and shortening iteration cycles for cross-functional research teams.
- Engineered high-throughput ETL pipelines for genome reference data with automated validation and monitoring, cutting preprocessing from 4 hours to 10 minutes.
- Built a KNN classification model for plant-microbe interaction prediction, achieving an F1 score of 0.68 and training researchers on what it did and did not support.
- Presented technical capabilities and pipeline architecture to 1,000+ end users and senior leadership at the annual user meeting.

PROJECTS

Fleet Orchestrator

Autonomous pull-request pipeline across 70+ repositories

github.com/gr8monk3ys/merge-gate

Python, GitHub Actions, gh CLI

- Scheduled Claude routines open pull requests across 70+ personal repositories; a merge policy lands a PR unreviewed only when its diff shape is allowlisted, every version delta is patch or minor, and a required check is green at the judged commit.
- Closed 22 dead PRs, fixed an Actions setting that had silently killed release runs in 20 of 22 repositories, and built a CI watchdog that caught a repo red for 37 days holding 15 mergeable PRs; 49 tests and a decisions log back the policy.
